WORK EXPERIENCE

Web Developer

From August 2020 to April 2021

ZenTek Data Systems Logo, Plantation, Florida

As the lead of the car rental project, I was responsible for managing all aspects of the rental process, from booking to return. I oversaw a team of agents who handled customer inquiries and reservations, as well as mechanics who maintained our fleet of vehicles. I also implemented a new online booking system that streamlined the rental process and improved customer satisfaction. As a result of our efforts, we saw a significant increase in rental revenue and positive customer feedback.

Web Developer

From March 2019 to October 2019

HELIX TECHNOLOGY GROUP INC Logo, Fort Lauderdale, Florida

I worked with other team members to brainstorm the idea, collect necessary data and execute it. I was in charge of designing and building the platform from ground up (both frontend and backend). Technologies used: HTML, CSS, JavaScript, PHP, MySQL and Laravel.

Web Developer

From May 2017 to October 2018

Webforest Agency, Miami, Florida

As the sole developer of a simple chatting application, I designed and implemented the core features that allow users to send and receive messages in real-time. The application uses a user-friendly interface that is easy to navigate and includes features such as message history, notifications, and the ability to add friends. To ensure reliability and security, I integrated modern encryption methods, and testing was carried out to ensure smooth performance.
